Welcome to the 2024 Greenup Eidsvold Station Sale Team

The sale will be on Thursday September 19, 2024, commencing at 12 pm at “Belvedere”, Eidsvold.

Extraordinary results are a product of consistency, standards and discipline. Our focussed and balanced approach to breeding has ensured the 2024 sale team is our most even line of bulls ever.

Ranked top 20-25% for growth, this draft of slick-coated, explosive growth bulls from a fertile cow herd, is testimony that the right genetics can provide weight for age, easy finishing, with fertility and desirable breed characteristics.

This 2024 team offers 136 Santa Gertrudis bulls, of which 97 are Classified ‘S’ bulls, 123 are poll/pollscur and 36 are homozygous poll.

The 2024 draft offers depth and consistency across our signature traits: temperament, fertility, muscling, explosive growth, easy-doing constitution, with desirable tropical attributes - underpinned by our strict standards.

Thirty six sires are represented in this sale team, of which thirteen are new release sires.

Determining future stud sires is like winnowing grain. There are standards and parameters. Standards like temperament, structure and fertility are non-negotiable and weigh heaviest in our minds. As potential sires that meet our standards are singled out, then we add further parameters for traits that are measurable, repeatable, and reliable.

Cattle breeding rewards patience and consistency, with permanent and cumulative gains if the breeding objectives are adhered to.

This year’s breeding decisions will impact our herds next year and for the next two decades.

Now is the time to review: What traits do we seek / wish to avoid? What are our standards? What parameters suit our herd, environment, and markets? What do we want less of? What do we need more of?

‘Intensive-extensive’ was how our operation was described recently. The bulls are bred in extensively managed herds in a range of environments and are monitored and measured at every stage. No special treatment is given to any cow, bull, or sire. Genuine pressure on the female herd, that does not include masking and compensation by management, reveals constitutional superiority and fertility.

Rigorous drafting allows the cream to rise to the top. Our bulls run in large cohorts, while being measured and compared until 400 days. From 400 days onwards, the draft of 700 bulls is whittled down to the 140 bulls presented for sale. The sale team has passed semen morphology and assessed by BULLCHECK accredited vet, Stacey Rae, Monto Vet. Our standards result in bull returns/breakdowns that are less than 1 bull breakdown per 200 bulls sold.

The sale will be livestreamed and interfaced with AuctionsPlus. We welcome pre-sale inspections. Full catalogues available at www.greenup.com.au or contact us or our agents, Elders and GDL, for a hard copy.

For your peace of mind, the herds are JBAS 7, the bulls are cleared for ticks, and fully vaccinated, and free delivery is offered to major selling centres and on-property wherever feasible.

We look forward to seeing you at “Belvedere”.

Rick, Alice, Ruby, James & Rory

GREENUP GUARANTEE

Our objective is to produce reliable seedstock that have predictable performance and proven fertility.

A simple philosophy “to breed profitable cattle for self-replacing commercial herds, which perform in all environments and within all major markets” remains at the heart of Greenup Eidsvold Station values.

Greenup Eidsvold Station runs in excess of 6000 head of Santa Gertrudis cattle, in the Burnett region of Queensland.

We supply hundreds of bulls annually to the Northern Australian Beef Industry to repeat clientele, over 95%.

We stand behind our bulls and all bulls are backed with the Greenup Guarantee for fertility and temperament.

Greenup Eidsvold Station bulls and their progeny are thriving across the arid rangelands of northern Australia, from the Pilbara, to the Kimberley, the

Gulf, Northern Territory, the far western reaches of Queensland and through the Downs and Central Queensland.

The feedback we get about how the bulls handle the heat, the distances to water and the work, reaffirms that the tough environment in which the 1800 stud females are run - the native pasture, the steep hills and granite Ironbark country - enables selection for superior constitution.

BULLS DONE RIGHT

Greenup Eidsvold Station Bulls are bred and prepared for a long & productive life.

Our business success hinges on our clients’ outcomes and their success, measured by:

1. Calves weaned and total kg produced per mated cow per year
2. Females re-breeding annually in arid, low-protein environments
3. Less costs by using fit, fertile bulls that walk far, work hard and last longer.

4. Turning off cattle earlier with more weight
5. Premium prices.
6. High weight gains and feed conversions
7. Carcase and eating quality traits
8. Improving c/kg by expanding market options

The outcome is functional, fertile herds that perform well in tough country, and provide the supply chain with rapid growth & ability to finish export or domestic cattle between 12 and 24 months of age.

KEEPING IT SIMPLE

The beef industry is demanding & requires reliable bulls that perform predictably.

The Greenup Eidsvold Station breeding program is underpinned by six decades of selection and the longest running objectively performance recorded herds.

Greenup Eidsvold Station are Breedplan herds.

We measure thousands of data records each year and use this data for ground-truthing subjective appraisals and to ensure we produce seedstock that is demonstrably improving

commercially relevant traits.

Our bulls are bred on the tough Ironbark forest country of the Great Dividing Range, under demanding, low-protein conditions. This environmental pressure ensures we continue to select for easy-doing cattle with exceptionally high constitution.

So whether you are a numbers person, or just want bulls that you can trust to do a job for you in any environment; you can be assured that they’ve qualified for the Greenup standard.

EVERY MARKET MATTERS

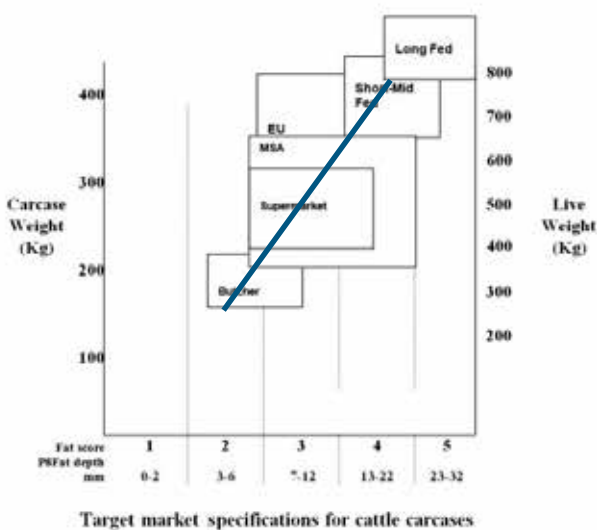

Figure 1. General weight range and fat cover guidelines for major beef markets.

Greenup Eidsvold Station Cattle maximise grid compliance and market versatility.

THE DIFFERENCE

Versatile cattle with high marketability can secure market premiums and avoid costly discounting.

When the season declines, the constitution, feed conversion and ability to finish, of Greenup Eidsvold Station Santas allow you to re-assess the feed, adjust your turn-off plan and redirect your cattle into different markets without costly discounting.

Call it what you want - market versatility / marketability / grid compliance - it's more \$ for the bottom line.

We approach our breeding with balance and a focus on market desirability with environmental adaptability.

The right genetics provide rapid growth, weight for age, easy doing cattle, with proven fertility, without sacrificing weight and value of your steers, cull cows and heifers.

“Not everything that can be counted counts.
And not everything that counts can be counted.”

Albert Einstein

Balanced Breeding

Greenup Eidsvold Station is one of largest data sets of objective performance records in Australia. We pride ourselves on this legacy, and provide data on traits that are objectively measured and most importantly - repeatable. Data must serve a commercial purpose and the outcomes must be reliable and predictable. We do not provide data on traits which are not repeatable and heavily prone to inconsistencies and vast swings (Eg semen morphology), enviromental noise and the consequential inaccuracies and high standard deviations (Eg +/-9 days for DTC of 50% accuracy). We advise strongly for moderation when considering all traits and for breeders to be wary of selecting for unintended correlations. or truncated breeding objectives with empahsis on only one or two traits.

A balanced, consistent breeding program will always prevail over time.

Breedplan Explained - Estimated Breeding Values (EBVs)

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These are called Estimated Breeding Values (EBVs). The EBV is therefore the best estimate of an animal's genetic merit for that trait. EBVs are expressed as the difference between an individual animal's genetics and the genetic base to which the animal is compared.

Accuracy

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy, the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

Fertility

Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

Growth

200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Carcase

Eye Muscle Area (EMA) EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals.

Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Rump Fat (p8) EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Intra-Muscular Fat (IMF) % is an estimate of the genetic difference in the percentage of intr-muscular fat at the 12/13th rib site in a 300kg carcass. Depending on target markets, more positive EBVs indicate higher IMF%.

Retail Beef Yeild represents the total meat yeild (boned out) as a percentage of a 300kg carcass. More positive EBVs indicate higher percentage yeild.

Breedplan figures cannot be compared between breeds

Only Santa Gertrudis GROUP BREEDPLAN EBVs with Accuracy (Acc) can be validly compared between herds.

July 2- 2024 Santa Gertrudis BREEDPLAN - Percentile Bands for all 2022 born animals

AuctionsPlus

How to Register and Bid on AuctionsPlus

You must be a registered bidder to bid online, you cannot bid as a viewer/guest

- 1 Go to www.auctionsplus.com.au to register at least 48 hours before the sale.
- 2 Select “**Sign Up**” in the top right hand corner.
- 3 Fill out your name, mobile number, email address and create a password.
- 4 Go to your emails and confirm the account.
- 5 Return to AuctionsPlus and log in.
- 6 Select “**Dashboard**” and then select “**Request Approval to Buy**”.
- 7 Fill in buyer details and once completed go back to Dashboard.
- 8 Complete buyer induction module (approx. 30 minutes).
- 9 AuctionsPlus will email you to let you know that your account has been approved.
- 10 Log in on sale day and connect to auction.
- 11 Bid using the two-step process – unlock the bid button and bid at that price.
- 12 If you are successful, the selling agent will contact you post sale to organise delivery and payment.

Approval may take up to 48 hours

BULLCHECK™ Scheme

About the BULLCHECK™ Accreditation Scheme

The standardised BULLCHECK™ Veterinary Bull Breeding Soundness Evaluation uses prescribed assessments and summarises the result into five fertility components. If a bull meets all the minimum standards at all levels of the BULLCHECK™, it has a high probability of being fertile.

In common law, a bull sold as a breeding bull should be able to breed (Supreme Court of NSW, Decision), so it is very important that as many as possible of the components of fertility are met in the BULLCHECK™. A pass on BULLCHECK™ is not an express guarantee, but rather an indication of the potential breeding value of the bull in a normal mating situation.

A full BULLCHECK™ of an animal includes identification, history (including vaccinations) plus five key components, namely:

- A general physical examination including structure (conformation) and upper reproductive tract
- An examination of the testes and measurement of scrotal size
- A serving assessment to evaluate libido and mating ability
- Collection and assessment of a semen sample
- Laboratory examination of sperm morphology.

The ACV recommends all five components be used for higher value bulls which may need to be used for single sire mating, or with heavier mating loads under more intensive conditions. Both the vendor and buyer can decide which fertility components they require their bulls to pass to meet their objectives during a transaction.

New Release Sire

Biara Bill 9048 (AI) (PP)

Classification: S

Homozygous Poll

Soc ID: BIA19M9048

Bill was purchased in 2021. We sought his balanced of fertility and growth traits, with EBVs ranked top 5% for fat traits. Bill is out of a proven cow with nine calves from nine joinings.

Two sons of Bills, have sold privately to Paraway's, Rocklands Station, Camooweal. A son, Uppercut U378 (P) has been retained for stud use.

for

Greenup Guarantee

Our bulls are guaranteed as breeders at time of purchase, however we accept no responsibility in the following circumstances:

- Injury or disease that occurs to animal after the sale;
- Gross negligence or willful misconduct on the part of the purchaser;
- In the event of an animal failing to breed, we agree that;
- The animal may be replaced with an animal of comparable value;
- Credit shall be given in the sum of the full purchase price, less salvage value;
- The vendor shall refund the money paid for the bulls.

These options shall be at the Vendors' election and the Vendor shall not be liable for any direct or indirect loss (including consequential loss) whatsoever.

Brands

All Greenup cattle and Quarter Horses are branded with Wings over Nought.

Eidsvold Station cattle are branded with Half Circle J

Number Brands: Greenup Eidsvold Station bulls are branded with even numbers and heifers with odd numbers.

Insurance

Insurance representatives will be at the sales and if requested will arrange insurance on the fall of the hammer.

Outside Agent: The vendors will pay a 3% rebate to outside agents who introduce genuine "new" buyers in writing at least 24 hours prior to the sale and is paid on previous eligible introductions. Rebate will not apply to existing Greenup Eidsvold Station clients, if unsure, please check with us beforehand. Settlement by the outside agent on the purchaser's behalf must occur within fourteen days of the sale. Commission will not apply to stud sires transferred to members of the SGBAA.

Risk & Responsibility: Any person attending the sale do so at their own risk and the vendor assumes no liability, legal or otherwise, for any injury, accident, loss or damage to any person or property.

Disclaimer: The vendors and agents have produced this catalogue with every effort to ensure the accuracy of the information, however will not be responsible for any errors or omissions.

PRE-SALE INSPECTIONS
